SUMMARY OF PRESENTATION

Tradelens-Digitizing the Supply Chain
Thomas Sproat
Senior Director, Tradelens, USA

Tradelens is an industry neutral platform developed by both IBM and Maersk to bring digitization to the supply chain. The platform enables customer to invite their supply chain partners onto the platform, as well as share documents amongst them. In addition to global tracking of their shipments from all the carriers on the platform.

As the platform is blockchain enabled, it is prepared to accept Smart Contracts that can be stored in the blockchain along with related trusted documents.

There is value for Carriers/Customers/Ports/Terminals/Rails/Feeders/Truckers/ and Authorities.
