

Biography

Name	
Biography	<p>Johan Byskov Svendsen has a scientific background as a geologist (1997) and holds a PhD in Geochemistry and Statistics from 2001. He has worked for more than two decades on oil & gas exploration and development projects around the world, as well as being asset manager for a number of operated platforms in the North Sea.</p> <p>From 2019-2021, he was leading the development of Carbon Capture and Storage in Denmark, from a niche concept at universities, to one of the most important climate action measures in Denmark. After maturing the first CO₂ Storage Site in Denmark into demonstration phase, he shifted focus to work for decarbonization of shipping.</p> <p>As a Program Manager at the Mærsk Mc-Kinney Møller Center for Zero Carbon Shipping, he is in charge of the maturation of several Green Corridors projects, as well as projects serving the needs for the first movers in the decarbonization of shipping. This includes work in Chile, Rotterdam-Singapore, Northern Europe-Baltic, US and South Korea.</p>
